*Matching condition depends on PCB layout.

Recommendations:

- Maximum permissable input signal power in the bandwidth should be less then 100 mW.
- Input signal amplitude in the stop band is limited to 5 V.
- Input signal amplitude in the stop band is limited to 5 V.
 DC voltage at the input (output) of the filter should not exceed 10 V.
- 4. It is recommended to include the coupling capacitor between the device and the generator (load).
- SAW filters are sensitive to static electricity, therefore corresponding precautions should be taken while working with them.
- 6. Do not expose the device to frequency vibrations more than 5 kHz. Do not use ultrasonic cleaners.

Design and production SAW filters, resonators, delay lines, sensors.
