*Matching condition depends on PCB layout.

Recommendations:

- 1. Maximum permissable input signal power in the bandwidth should be less then 100 mW.
- 2. Input signal amplitude in the stop band is limited to 5 V.
- 3. DC voltage at the input (output) of the filter should not exceed 10 $\rm V.$
- 4. It is recommended to include the coupling capacitor between the device and the generator
- 5. SAW filters are sensitive to static electricity, therefore corresponding precautions should be taken while working with them.
- 6. Do not expose the device to frequency vibrations more than 5 kHz. Do not use ultrasonic
